

**We are currently updating the OP Help Center content for the release of OP 14.19 or "OP 19". OP 19 is a member of the certified OP 14 family of products (official version is 14.19.1), which you may see in your software (such as in Help > About) and in the Help Center tabs labeled 14.19. You may also notice that the version number in content and videos may not match the version of your software, and some procedural content may not match the workflow in your software. We appreciate your patience and understanding as we make these enhancements.**

## When does the Donor ID field get populated on an Implantable Device entry?

Last Modified on 07/19/2019 12:38 pm EDT

If the Implantable Device is considered a tissue-based product or HCT/P, OP will include a Donor ID that is found from the search within the GUDID (Global Unique Device Identifier Database). The field will not present within the form if the Implantable Device is not considered a tissue-based product.
