Prescribing Narcotics

Last Modified on 02/08/2021 11:03 am EST

Version 14.19

Narcotics Used for Detox and Maintenance

When a drug used for detox or maintenance (e.g., Suboxone) is selected, once the user clicks send, a window will display with a field where the prescriber's NADEAN number will be pre-populated if it is set-up in the Staff/Provider Directory. If it was not previously set-up, the user can enter a NADEAN in the field. A NADEAN number must be nine characters, with the first two being alpha and the last seven numeric. The remaining steps to send are the same when sending an electronic controlled substance. See [Prescribing with EPCS](#).

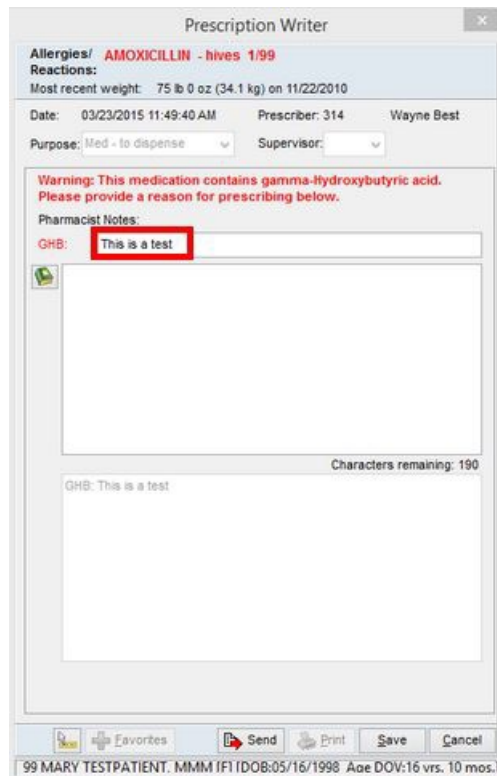

The screenshot shows a window titled "Prescription Writer". At the top, it lists "Allergies/ Reactions: AMOXICILLIN - hives 1/99" and "Most recent weight: 75 lb 0 oz (34.1 kg) on 11/22/2010". Below this, it shows "Date: 3/23/2015 12:00:41 PM", "Prescriber: 314 Wayne Best", "Purpose: Med - to dispense", and "Supervisor: [dropdown]". A red warning box states: "Warning: This medication requires inclusion of your Narcotics Addiction DEA Number (NADEAN). Please confirm the number". Under "Pharmacist Notes", there is a text field containing "NADEAN: NS1234567" which is highlighted with a red box. Below the notes is a large empty text area with "Characters Remaining: 191" and a pre-populated "NADEAN: NS1234567". At the bottom, there are buttons for "Send", "Print", "Save", and "Cancel". The status bar at the very bottom reads: "99 MARY TESTPATIENT. MMM IF1 (DOB:05/16/1998 Aae DOV:16 yrs. 10 mos.1".

Prescription Writer

Narcotics with Gamma-hydroxybutric acid (GHB)

Medications prescribed which contain GHB such as Xyrem require the user to enter a reason for prescribing. Like NADEAN, once the user clicks send, a window will display prompting the user to enter a reason. The reason must be at least 5 characters long. The remaining steps to send are the same when sending an electronic controlled substance. See [Prescribing with EPCS](#).
