

Important Content Update Message

We are currently updating the OP Help Center content for the release of OP 20. OP 20 (official version 20.0.x) is the certified, 2015 Edition, version of the Office Practicum software. This is displayed in your software (**Help tab > About**) and in the Help Center tab labeled Version 20.0. We appreciate your patience as we continue to update all of our content.

Prerequisites for Setup of EOS

Last Modified on 12/23/2019 2:01 pm EST

Prerequisites for setup include:

Office Practicum must already be installed and be able to connect to the network database and run.

Note: When running the client install program, select the checkbox in the install program to designate this workstation as the emergency workstation.

This automatically sets up the op911 folder and op911 text files.

- Firebird Superserver (full installation with server tools) has been installed and Started on the workstation.
- The OPBackup Program has been installed. See the [OPBackup Program](#) for installation instructions.
- Disk space - You must have enough space on your local drive to store the back up as well as the restore files.
- The workstation must be left on at all times and system restore and hibernation should be turned off.
