

Important Content Update Message

We are currently updating the OP Help Center content for the release of OP 20. OP 20 (official version 20.0.x) is the certified, 2015 Edition, version of the Office Practicum software. This is displayed in your software (**Help tab > About**) and in the Help Center tab labeled Version 20.0. We appreciate your patience as we continue to update all of our content.

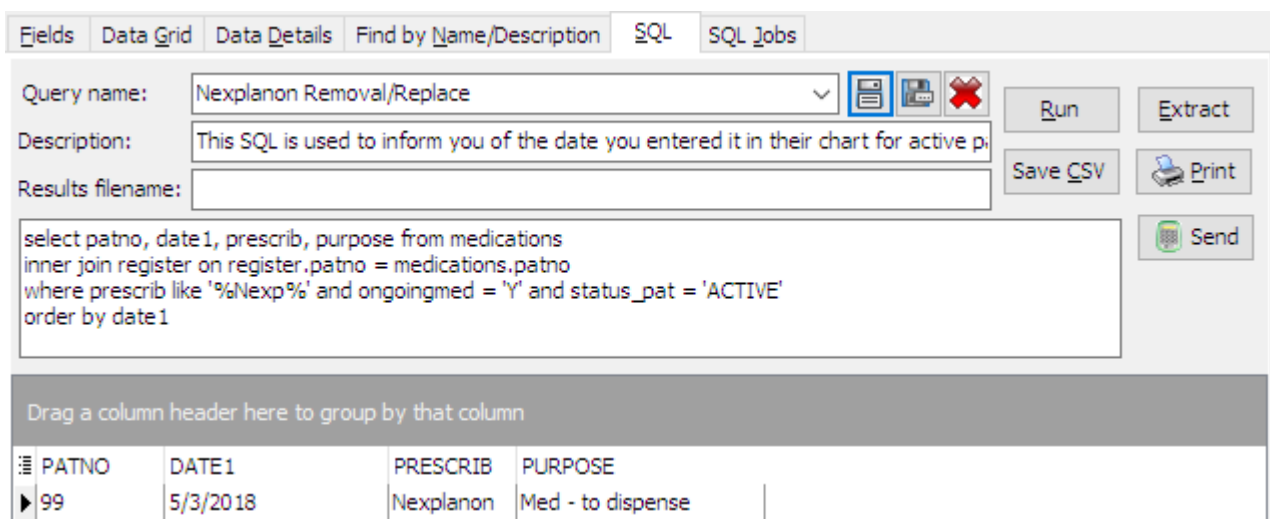

SQL: Nexplanon Removal/Replace

Last Modified on 11/19/2019 11:21 am EST

About

This SQL is used to inform you of the date you entered it in their chart for active patients who have Nexplanon listed as an ongoing/chronic med.

A sample image of this SQL report run in the Database Viewer is shown below:

The screenshot shows the Database Viewer interface with the SQL tab selected. The query name is "Nexplanon Removal/Replace". The description is "This SQL is used to inform you of the date you entered it in their chart for active patients who have Nexplanon listed as an ongoing/chronic med." The results filename is empty. The SQL query is:

```
select patno, date1, prescrib, purpose from medications
inner join register on register.patno = medications.patno
where prescrib like '%Nexp%' and ongoingmed = 'Y' and status_pat = 'ACTIVE'
order by date1
```

Below the query, there is a table with the following data:

PATNO	DATE1	PRESCRIB	PURPOSE
99	5/3/2018	Nexplanon	Med - to dispense

Caveats

Depending on how you document Nexplanon:

- The date may be the date when the patient informed about it
- The date may be the date when you ordered it from the pharmacy
- The date may be the date when you placed it

So, your resulting workflow is going to differ.

Code

To highlight and copy the code below to your clipboard, simply click the **Copy** button.

Copy

```
select patno, datel, prescrib, purpose from medications
inner join register on register.patno = medications.patno
where prescrib like '%Nexp%' and ongoingmed = 'Y' and status_pat = 'ACTIVE'
order by datel
```
