Download Page for .rtm Files

Last Modified on 04/11/2023 8:46 pm EDT

Version 21.0

OP now includes the location of the Practice the end user logs in from to the header of in-house lab requisitions for the Diag_Test_Single report. This enhancement is to ensure that these reports abide by Clinical Laboratory Improvement Amendments (CLIA) guidelines and COLA standards.

With this enhancement, when the end user clicks the Print button for the Diag_Test_Single report or the Section_List report, OP adds the Practice location where the end user is logged in (in addition to the Practice name and phone number) to the header of the report.

However, in order to fully implement this functionality into your version of OP software, you must import the latest .RTM files for these reports.

> **Warning**: If the Diag_Test_Single or the Section_List reports exist in your OP system and you have customized either report, importing this latest version will overwrite your customized changes

Click on the links below to download the latest Diag_Test_Single and Section_List RTM files. Then **follow the procedures** for importing the updated RTM files into your OP.

File

You can download the Diag_Test_Single .rtm file by clicking **here**.

You can download the Section_List .rtm file by clicking **here**.
