SQL: MU State Group 3 Drill Down
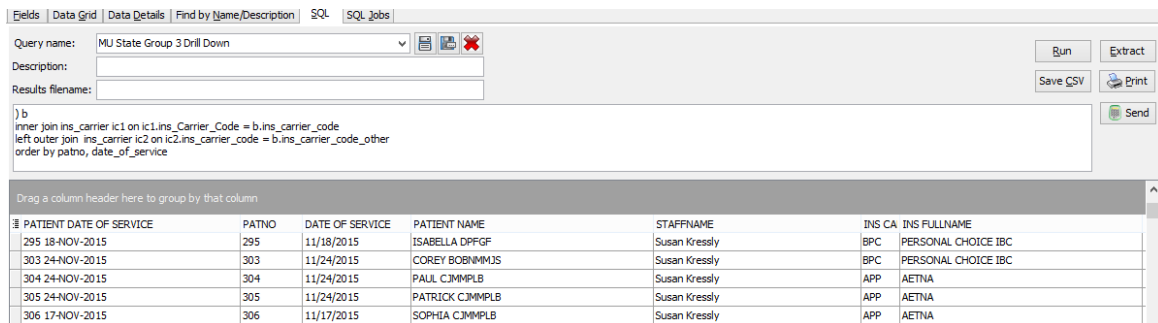

Last Modified on 01/29/2021 3:00 pm EST

About

This SQL Code provides detailed attestation results at the patient level for states that were grouped into Group 3 in the **MU: State Group SQL Table**. The report provides patient-level detail for audit purposes.

> 📌 **Note**: Export, save, and print all results for audit purposes at the time you run them for actual volume validation.

A sample image of this SQL report run in the Database Viewer is shown below:

Caveats

- Individual drill down requires the providers ID number to retrieve only that provider's data. If you prefer to select from a dropdown and filter to the provider, you will want to use the Group level detail report.
- Depending on your billing, you may need to make some adjustments to the SQL code to **exclude certain CPT codes** from Encounter visits and/or to **exclude some insurance payers** as Medicaid.
- Provider decision to submit results as an individual.
- State is listed in group 3 (see **MU: State Group SQL Table** and **MU: State Assumptions**).
