

Important Content Update Message

We are currently updating the OP Help Center content for the release of OP 20. OP 20 (official version 20.0.x) is the certified, 2015 Edition, version of the Office Practicum software. This is displayed in your software (**Help tab > About**) and in the Help Center tab labeled Version 20.0. We appreciate your patience as we continue to update all of our content.

How is BMI calculated in OP?

Last Modified on 02/03/2020 4:09 pm EST

In OP, you have the option to include the diagnosis for BMI% when charting a well or an encounter visit and the patient's height and weight measurements are entered in the Vitals/Growth window.

From the **Assessment**, select the checkbox **Auto-calculate BMI code**.

Note: To include the BMI code on a well or encounter visit note you must select Assessment.

Selecting Assessment from a note will include the BMI Dx code on the Add/Edit Charges window.

OP uses the following codes for patients 2 to 20 years of age:

- Z65.51 (<5%)
- Z68.52 (5%<85%)
- Z68.53 (85%<95%)
- Z68.54 (>=95%)

OP uses the following codes for patients 21 years and older:

- Z68.21 to Z68.45 (BMI range 21+)
