

We are currently updating the OP Help Center content for the release of OP 14.19 or "OP 19". OP 19 is a member of the certified OP 14 family of products (official version is 14.19.1), which you may see in your software (such as in Help > About) and in the Help Center tabs labeled 14.19. You may also notice that the version number in content and videos may not match the version of your software, and some procedural content may not match the workflow in your software. We appreciate your patience and understanding as we make these enhancements.

When do I use the New button on the Immunizations Complete List tab?

Last Modified on 07/30/2019 9:19 am EDT

From the Complete tab of a child's Immunization record you have the ability to create new vaccine records. The New button can be used to enter historic vaccine records, in place of Quick Entry. From this window you may enter detail information for a vaccine such as: route, body site, source of vaccine information, administering facility and adverse reaction, to name a few.
