

We are currently updating the OP Help Center content for the release of OP 14.19 or OP 19. OP 19 is a member of the certified OP 14 family of products (official version is 14.19.1), which you may see in your software (such as in Help > About) and in the Help Center tabs labeled 14.19. You may also notice that the version number in content and videos may not match the version of your software, and some procedural content may not match the workflow in your software. We appreciate your patience and understanding as we make these enhancements.

# PHC Hub Registries Interface Best Practices

Last Modified on 09/17/2019 10:22 am EDT

## Overview

The information below is best practice when using the PHC Hub Registry.

- Mark all vaccine registry error message tasks complete, this should be done daily.
- Registry task errors or warnings, take the following actions:
  - Correction required, click [here](#) for detail instruction on how to make corrections.
  - Mark the task complete when receiving an acknowledgment of successful transmission in a Warning message.

**Note:** Failure to mark tasks Complete will result in the vaccine records remaining in the queue and will repeatedly trigger more errors when trying to resent the information to the registry. The following error will persist: Vaccination date is more than 30 days ago.

- If concerned that a patient's immunizations did not get sent to the registry, you can confirm by performing the manual Sync with your registry.

Immunizations							Print	Refresh	Quick Entry	Sync Registry	Consent Form	Administer Vaccines
