

Important Content Update Message

We are currently updating the OP Help Center content for the release of OP 20. OP 20 (official version 20.0.x) is the certified, 2015 Edition, version of the Office Practicum software. This is displayed in your software (**Help tab > About**) and in the Help Center tab labeled Version 20.0. We appreciate your patience as we continue to update all of our content.

Common Pediatric Medication Dosing Units/Quantity

Last Modified on 12/11/2019 3:08 pm EST

Overview

Below is a compilation of specific dispensing units and available sizes for commonly prescribed pediatric medications as of 10/4/19. This is not meant to be a complete list, but a means for practices to remap their saved favorites without having to do research on each medication. Medications change constantly, including manufacturers and available volumes and not all formulations are available at every pharmacy. Please use the information as advisory assistance from Office Practicum's Medical Director and make practice level decisions accordingly.

Note: To quickly find the form you want in this table

- **Filter:** Enter specific key words (or a character string) in the filter bar. As you enter characters in the filter bar, the rows not containing those characters will become hidden. The visible rows display based upon the characters in the row that match the characters in the filter bar. The more characters you enter, the more the table will be filtered. Please only use key words and correct spelling. You can use letters and numbers. **Do not use commas to separate keywords**
- **Sort:** You can sort A - Z and Z - A by clicking on a column header.

Note: Java must be enabled in order to use the search and sort capability.
