

We are currently updating the OP Help Center content for the release of OP 14.19 or OP 19. OP 19 is a member of the certified OP 14 family of products (official version is 14.19.1), which you may see in your software (such as in Help > About) and in the Help Center tabs labeled 14.19. You may also notice that the version number in content and videos may not match the version of your software, and some procedural content may not match the workflow in your software. We appreciate your patience and understanding as we make these enhancements.

When adding a provider, what is the difference between Full Access and Practice Only under Data Sharing?

Last Modified on 10/07/2019 2:30 pm EDT

Full Access means that data can be shared among all practices when the Enterprise has multiple practices. Practice Only sets the patient data to be shared with the single practice only.
