# Color Coding for Review of Systems

Last Modified on 10/21/2020 3:31 pm EDT

Version 20.7

## Overview

The Review of Systems (ROS) questions color indicators OP uses is to draw attention to abnormal information which may require attention. OP uses **red** to indicate an abnormal finding while **green** is used to indicate the normal finding. In OP, well visit notes and encounter notes are separate and distinct entities and stored differently in the database. As you look closely at the ROS section of an encounter vs. a well visit the normal state is reversed.

## Encounter Note ROS

For an encounter visit, when a symptom or question is affirmed, this establishes the abnormal state so the symptom or question is reported as red. When a symptom or question is denied, this establishes the normal state so the symptom or question is reported as green.

ROS: <input type="checkbox"/> Show all groups		
Detailed ROS   Freeform ROS		
Rpt / Deny	Question / Symptom	Comment
<b>Constitutional</b>		
Reports	fever/chills	
Denies	body aches	
Denies	headache	
Reports	not sleeping well	
<b>Eyes</b>		
Denies	red eyes or eye drainage	
<b>ENT</b>		
Denies	runny nose and/or nasal congestion	
Reports	sore throat	
Denies	postnasal drip	
Denies	ear pain	

When a note is displayed as a report summary, the abnormal state becomes underlined to draw the reader's attention.

**ROS:**

**Constitutional:** Reports fever/chills, not sleeping well. Denies body aches, headache.

**Eyes:** Denies red eyes or eye drainage.

**ENT:** Reports sore throat. Denies runny nose and/or nasal congestion, postnasal drip, ear pain, mouth ulcers.

## Well Visit Note ROS

For a well visit, the normal state is "affirming wellness". When confirming the symptom or question, this establishes the normal state so the symptom or question is reported in green. When a symptom or question is denied this establishes the abnormal state so the symptom or question is reported as red.
