How do I send a medication for narcotics used for detox and maintenance?

Last Modified on 04/24/2020 8:02 am EDT

When a drug used for detox or maintenance (e.g., Suboxone) is selected, once you click the Send button, a window is displayed with a Field where the prescriber's NADEAN number will be pre-populated if it is set-up as described above. If it was not previously set-up, you can enter a NADEAN in the field. A NADEAN number must be nine characters, with the first two being alpha and the last seven numeric.

The screenshot shows the 'Prescription Writer' window. At the top, it lists 'Allergies/ Reactions: AMOXICILLIN - hives 1/99'. Below this, it shows 'Most recent weight: 75 lb 0 oz (34.1 kg) on 11/22/2010'. The 'Date' is 3/23/2015 12:00:41 PM, 'Prescriber' is 314 Wayne Best, and 'Purpose' is 'Med - to dispense'. A warning message states: 'Warning: This medication requires inclusion of your Narcotics Addiction DEA Number (NADEAN). Please confirm the number'. Below the warning, the 'Pharmacist Notes' section contains a 'NADEAN' field with the value 'NS1234567' highlighted by a red box. At the bottom of the window, there is a 'Characters Remaining: 191' indicator and a 'NADEAN: NS1234567' label. The bottom status bar shows '99 MARY TESTPATIENT. MMM IF1 DOB:05/16/1998 Age DOV:16 yrs. 10 mos.1'.
