## Q1 Kick-Off: A Video Message from Dr. Sue Kressly

## 21st Century Cures Act Webinar Recording & Resources

- [Recording and resources from Dr. Kressly's 21st Century Cures Act webinar, presented January 26, 2021](#)
- [Recording and resources from Dr. Kressly's 21st Century Cures Act webinar, presented March 9, 2021](#)
- Other [21st Century Cures Act](#) resources, such as a message from Dr. Sue Kressly, the proposed rule changes, quick access to external resources, and a pediatric practice checklist.

## Recall Patients Due for Well Visits or Other Follow-Ups

Staying on top of patient recalls is one way to ensure that patients who have health needs requiring follow-up and patients who are due or behind on their Well Visits are receiving the care they need. Use the resources below to run recalls for:

Patients who...	Via SQL Report	Via Demographic Analysis/Recall Report
are overdue for a <b>Well Visit</b>	<b>SQL: Bright Futures Past Due Recall</b>	After creating a <a href="#">Patient Demographics List</a> , run a <b>Care Plan Recall</b> and select <b>Recall Plan: Bright Futures Preventive</b> and <b>Recall Item: Preventive Encounter</b> to get your list of patients overdue for a Well Visit. Care Plan Recalls can also be used to recall patients who are enrolled in other practice Care Plans.
receive care for <b>Asthma</b>	<b>SQL: Asthma Recall:</b> This SQL lists all patients who have been prescribed Albuterol in the past year.	After creating a <a href="#">Patient Demographics List</a> , run a <b>Clinical Recall</b> and use the Problem drop-down to select the appropriate problems to include in the report. If the recall should also include patients who were prescribed specific medications, select them using the Medication drop-down.
receive care for <b>ADHD</b>	<b>SQL: ADHD Recall:</b> This SQL lists all patients who have been prescribed an ADHD medication in the past year.	
receive care for <b>Depression</b>	<b>SQL: Depression Recall:</b> This SQL lists all patients who have been prescribed a Depression medication in the past year.	
receive care for <b>Anxiety</b>	<b>SQL: Anxiety Recall:</b> This SQL lists all patients who have been	

	prescribed an anxiety medication in the past year.	
had a last previously documented BMI $\geq$ 95%	<b>SQL: BMI Recall</b>	After creating a <b>Patient Demographics List</b> , run a <b>Clinical Recall</b> and use the Problem drop-down to select the appropriate BMI measurement to include in the report.

After running your recalls, you'll want to reach out to the patients to get them scheduled for visits:

- Visit **Clip-and-Save SQL: Quickstart!** for information on how to save the SQL(s), export the information, and send messages using PMX.
- Visit **Demographic Analysis and Recall Overview** for information on how to print letters, send messages using PMX and export the information.
