

Add a Compound Medication

Last Modified on 01/20/2024 5:04 pm EST

Version 21.3

About

There is sometimes a need to send a prescription to the pharmacy that includes instructions for the pharmacist to compound a medication using a combination of known individual medications, both prescription and/or OTC.

In other circumstances, a clinician might want to prescribe a medication like FIRST-Omeprazole (tm), Because [\[\[FIRST-Omeprazole \(tm\) is not FDA-approved\]\]](#) [FAQs | Azurity | Compounding Kit Manufacturer](#)]] the kit's NDC number is not listed in supplied Master List. However, a prescriber can issue a prescription that it be compounded from FDA-approved bulk ingredients like 49884-0268-52 (which is essentially what a FIRST kit does.)

In the example below, we'll use a Test Patient to add "Magic Mouthwash" to the Favorites List.

1. Navigate to Patient Chart and search for and select a Test Patient.
2. Click **Medications**, then click the **New** button.
3. In the Drug field, begin typing the name of the largest component, and click the ellipsis button to open the Medication Finder window.
4. In the Medication Finder window, click the **Master List** tab.
5. (Optional) If you did not type a name in the Drug field, type the name of the largest component of the compound medication into the Search field.
6. (Optional) Use the filter button in the Form column to filter down the list, if needed.

7. For the SIG, select the **Freeform** radio button.
8. Write the details to include how much of the selected medication as well as a text description of both what/how much to add and instructions for the patient.

Prescription: LEIGH TESTPATIENT (253)

Allergies/ Reactions: No active medication allergies or reactions

Reactions: Wt: 68 lb 3 oz (30.9 kg) on 05/22/2023 Ht: 54.0 in (137.2 cm) on 05/22/2023

Date: 11/28/2023 10:48 AM Prescriber: 476 Cora Noel

Purpose: Med - to dispense Supervisor: Pharmacy: TEST 000 PHARMACY 10.6MU

Primary DX: Type: Standard Medication Drug: Lidocaine Viscous solution 2%

About

There is sometimes a need to send a prescription to the Pharmacy that includes instructions for the Pharmacist to compound a medication using a combination of known individual medications, both prescription and/or OTC. In the example below, we'll use a Test Patient to add "Magic Mouthwash" to the Favorites List.

1. Navigate to Patient Chart and search for and select a Test Patient.
2. Click **Medications**, then click the **New** button.
3. In the Drug field, begin typing the name of the largest component, and click the ellipsis button to open the Medication Finder window.
4. In the Medication Finder window, click the **Master List** tab.
5. (Optional) If you did not type a name in the Drug field, type the name of the largest component of the compound medication into the Search field.
6. (Optional) Use the filter button in the Form column to filter down the list, if needed.

- For the SIG, select the **Freeform** radio button.
- Write the details to include how much of the selected medication as well as a text description of both what/how much to add and instructions for the patient.

- Click the **Add to Favorites** button. The Medication Favorite Information window is displayed.
- In the Category field, enter a new **Category** or use the drop-down to select from the list.
- Name the medication in the Prescription Favorite Title field. The title is used when searching for a medication, so make this a user-friendly name.

The image shows a dialog box titled "Medication Favorite Information" with a close button (X) in the top right corner. The dialog contains the following fields and options:

- "Choose or create a new Category:" with a dropdown menu showing "COMPOUND".
- "Prescription Favorite Title: (35 char) (optional)" with a text input field containing "Magic Mouthwash".
- Two unchecked checkboxes: "Include prescriber's note" and "Allow proxy use by non-prescribers".
- "Rounding method (optional):" with three radio button options: "Normal", "Up", and "Down".
- "OK" and "Cancel" buttons at the bottom.

12. Click the **OK** button.
13. Click the **Cancel** button to close the Prescription window.
