

Carequality Outbound Patient Data

Last Modified on 07/21/2023 2:11 pm EDT

 This is a contracted feature. Contact solutions@officepracticum.com to learn about implementing this in your Practice.

About

Carequality is a national HIE (Health Information Exchange) in which patient information is placed for sharing amongst health care providers. This article will go over what data types are shared from OP to Carequality, how they are shared, and how you can view the information that was shared.

What Data Types Are Shared From OP To the Carequality Network?

At this time, only **encounter** and **well note summaries** in **CCD format** are shareable via Carequality.

- After finalizing an encounter or well note, a **CCD will automatically be created for that visit**. Those CCDs will be available in the Carequality repository for other practices to search and download.
 - If a note is not truly finalized, meaning it **requires a co-sign**, a CCD will not be created and the CDA button will be greyed out. When the note is co-signed, a CCD will be created.
- CCD generation will **respect the confidential flag** in other words, the CCD will only contain content **marked with a privacy constraint of "A" (any staff member)**.

How Do I See The Data That Was Shared?

Once the CCD gets created from the encounter or well note summary, the document will show in the **Referrals** Category of the patient's **Document Management**.

- To see what the CCDs look like and what information is available for others, [navigate to Document Management and search by Category](#) (Category = **Referrals**).
- CCD Outbound refresh timing depends on your API, but normally refreshes and sends every five minutes.
