SQL: All Contacts of Active Patients

Last Modified on 10/09/2024 4:05 pm EDT

About

This SQL shows all contacts attached to a patient's chart (contact 1, 2, 3, 4, 5, etc), the contact Name, Role, Authority, which contact (DENORM_NO), and Home and Work emails.

Caveats

Contacts who are enumerated as #1 and #2 will be listed irrespective of their relationship to the patient.   These may or may not be suitable to contact for your purposes! For example, a patient who is over 18 may have an emergency contact but it would not be appropriate to send information to the emergency contact. A child might have contact #1 = mother and contact #2 = grandfather for emergency purposes but only mother should be contacted about this particular child's medical issues.

SQL Code

To highlight and copy the code below to your clipboard, simply click the **Copy** button.

Copy

```
select patno, (first_name || ' ' || last_name) as contact_name, contact_role, contact_authority, denorm_no, home_email
, work_email
  from  register
inner join register_contact on register.patno = register_contact.patno
inner join contact on contact.id = register_contact.contact_id
where patno is not null and patno >= 99
and lname not in ( 'TESTPATIENT','TEST-PATIENT')
and status_pat = 'ACTIVE' and contact_role  not in ('PRIOR_PHONE', 'PRIOR_ADDR')
order by patno
```
